23. Problem: (use additional Sheets if necessary) After the firewall AIX 5.1 upgrade, it was notice at GDAAC and LPDAAC that errors where getting report on the firewall. The IBM error reporting program, errpt, is reporting "TRANSMIT FAILURE". In turn the CISCO switch is showing intermittent link dropouts.						
24. Proposed Solution: (use additional sheets if necessary) IBM reports a timing issue with AIX 5.1. IBM has put out a fix, IY48720, for the GE interface model 14100401 that is install on the firewalls. Driver was loaded and tested in VATC and PVC without any problem. This could be a load related issue as other upgraded sites with GE have not shown these errors, but it is highly recommended all firewall with GE 14100401 install the fix. The SMC does not have any GE interfaces. Check sum numbers: 3047753706 568320 devices.pci.14100401.rte.5.1.0.53.bff						
25. Alternate Solution: (use additional sheets if necessary) None.						
26. Consequences if Change(s) are not approved: (use additional sheets if necessary) Firewall GE transmits failure and Cisco switch link dropout may impact DAAC network throughput.

Title of Change: Release IBM IY48720 Patch for DAAC firewalls.

For VATC and PVC firewall:

Create a new directory under /tmp. Call it '/tmp/fixes/GENic'. Change directory to /tmp/fixes/GENic.

```
#mkdir /tmp/fixes/GENic <enter>
```

```
#cd /tmp/fixes/GENic <enter>
```

FTP the file 'devices.pci.14100401.rte.5.1.10.53.bff' from your DAAC staging area. Now check that the file is good with the AIX command cksum as follows:

```
# cksum devices.pci.14100401.rte.5.1.0.53.bff
```

The results are shown below:

```
3047753706 568320 devices.pci.14100401.rte.5.1.0.53.bff
```

Now type the following command:

```
#inutoc . <enter>
```

This will build the '.toc' file the installation program needs. Start the SMIT program with the following command:

```
#smit <enter>
```

The first menu heading will read System Management. Select/click on choice:

Software Installation and Maintenance

Next select/click on the box labeled as follows:

Install and Upgrade Software

Now select/click on the box labeled as follows:

Update Installed Software to Latest Level (Update All)

A new menu will pop up. It will display the message/question "INPUT device / directory". Write in the directory path '/tmp/fixes/Genic' where the files are located. Click on 'OK' button.

Next menu will pop up. Take all the defaults. Click on 'OK' button to continue.

A new dialog box will display 'Are You Sure', click on 'OK' button to start installing the file sets. Estimated installation time is less than 2 minutes. Look for a similar message to this:

bosboot: Boot image is 13433 512 byte blocks.

0503-292 This update will not fully take effect until after a system reboot.

Cancel all the way out of SMIT. You will have to reboot the firewall as stated.
